INTRINSIC STAINS

Stains beneath the tooth enamel are known as **intrinsic stains**. This type of staining is commonly caused by:

- Aging
- Defects within the tooth
- Use of certain antibiotics during tooth development
- Smoking

Also, your diet can affect the brightness of your smile. The following foods and beverages often contribute to tooth stains on or beneath tooth enamel:

- Tobacco products
- Coffee
- Tea
- Red wine
- Colored juices
- Curry
- Soy
- Cola drinks
- Minerals in well water

WHITENING OPTIONS

If you are concerned about the color of your teeth, ask your dentist or hygienist about various options for tooth whitening, including:

CREST PROFESSIONAL WHITESTRIPS

Whitening Technology that gives you noticeably whiter teeth

- Crest® Whitestrips contain hydrogen peroxide, which gets at stains beneath the tooth surface
- Thin, clear, Flexible strips adhere directly to teeth
- Just 30 minutes, twice a day for 3 weeks

Cosmetic Dentistry

KEEPING TEETH WHITE

After any whitening procedure, daily care is key in keeping teeth bright. Brushing with a whitening toothpaste like Crest® Vivid White will help to maintain whiter teeth and ensure good oral health. Sodium hexametaphosphate, a key ingredient in Crest Vivid White, provides stain removal and protection benefits.

POWERFUL WHITENING

WHITENING PROTECTION

Ask your dental professional how these Crest products can help you:

- Crest Whitestrips Supreme
- Crest Vivid White
